SUMMARY

This annual report, the 34th of its kind, summarizes measurements from the National Air Pollution Surveillance (NAPS) network for the year 2003. The air monitoring stations of the NAPS network are operated by the NAPS network agencies of the federal, provincial, territorial and municipal governments. The network is coordinated by the Analysis and Air Quality Division of Environment Canada.

Part I summarizes gaseous ambient air quality summary data for 2003 for sulphur dioxide, carbon monoxide, nitrogen dioxide, nitric oxide and ozone.

Particulate matter (PM) data including $PM_{2.5}$ and PM_{10} (particles with aerodynamic diameters of less than 2.5 and 10 micrometers respectively) for mass, lead and sulphate are also summarized. Suspended particulate matter data are no longer being reported in the NAPS Network annual data summaries starting with this report for 2003.

The report includes data for a number of organic compounds including benzene, toluene, tetrachloroethylene, dichloromethane, 1,1,1-trichloroethane and 1,3-butadiene, from the NAPS network toxics sampling program. Organic compounds are emitted into the atmosphere from a variety of sources including vehicle exhaust, industrial operations, general solvent use and wood combustion.

A list of all the pollutants measured in the NAPS network including the pollutants analyzed in our laboratories is provided in the report. Data reports may be obtained on request on any specific data from the NAPS database.

Part II of the report compares the 2003 data with the National Air Quality Objectives. Further to a review of the objectives in 1992, a new National Ambient Air Quality Objectives (NAAQOs) framework was proposed. This framework, introduced in the data report for the year 2000, specifies two levels: a Reference Level, which is the level above which there are demonstrated effects on human health and/or the environment, and an Air Quality Objective (AQO), which is a concentration that reflects a specified level of protection for the general population and environment and which also considers aspects of

SOMMAIRE

Ce rapport annuel, le 34e de cette collection, présente un sommaire des mesures du Réseau national de surveillance de la pollution atmosphérique (RNSPA) pour l'année 2003. Les stations de mesure de la qualité de l'air sont exploitées par les organismes du réseau NSPA des gouvernements fédéral, provinciaux, territoriaux, et des administrations municipales. La coordination du réseau est assurée par la Division des analyses et de la qualité de l'air d'Environnement Canada.

La Ière partie du rapport présente les données sommaires de 2003 sur la qualité de l'air pour le dioxyde de soufre, le monoxyde de carbone, le dioxyde d'azote, le monoxyde d'azote et l'ozone.

Les données sur les matières particulaires (MP) incluant les $MP_{2,5}$ et les MP_{10} (particules de diamètres aérodynamiques moins de 2.5 et 10 micromètres respectivement) sur la masse, le plomb et le sulfate sont aussi résumées. Les données sur les matières particulaires en suspension ne sont plus incluses dans les sommaires annuels RNSPA commençant avec ce rapport pour 2003.

Le rapport comprend des données sur un certain nombre de composés organiques comme le benzène, le toluène, le tétrachloroéthylène, le dichlorométhane, le 1,1,1-trichloroéthane et le 1,3-butadiène, provenant du programme d'échantillonnage des polluants toxiques du RNSPA. Les composés organiques sont émis dans l'atmosphère à partir de diverses sources, notamment les gaz d'échappement des véhicules, les exploitations industrielles, l'utilisation des solvants et la combustion du bois.

Une liste de tous les polluants mesurés dans le réseau NSPA incluant ceux analysés dans nos laboratoires est présentée dans le rapport. Des rapports spécifiques peuvent être préparés sur demande sur toutes données de la banque de données RNSPA.

La IIe partie du rapport compare les données de 2003 aux objectifs nationaux en matière de qualité de l'air. Suite à une revue des objectifs en 1992, le nouveau cadre suivant pour les objectifs nationaux de qualité de l'air ambiant (ONQAA) fut proposé. Ce nouveau cadre qui fut introduit dans le rapport des données de l'année 2000 ne compte que deux niveaux: un niveau de référence, c'est-à-dire, la concentration au-dessus de laquelle on observe des effets manifestes sur la santé humaine ou l'environnement (ou les deux), et un objectif en matière de la qualité de l'air (OQA) lequel définit une concentration qui, non seulement assure un

technical feasibility.

The original NAAQOs have not been formally revised to the new two level system so as an interim approach, in part II of the report, the 2003 data are compared with the existing desirable and acceptable National Ambient Air Quality Objectives (NAAQOS) for sulphur dioxide, carbon monoxide, nitrogen dioxide and ozone. The number of data points exceeding the national air quality objective for the tolerable level is not being reported as of the data report for 2001.

Part III of this report, lists the Canada-wide Standards (CWS) for ozone and $PM_{2.5}$ and reports data for the current year and the two previous years using the same statistical approach as prescribed by the CWS. The results presented in this report should not be related to formal achievement of the CWS.

Information and data in this report were obtained from the NAPS network agencies. Further information is available from the Environmental Technology Advancement Directorate, Environmental Protection Service, Environment Canada and the NAPS network cooperating agencies. This report is published on the Internet site: www.etc-cte.ec.gc.ca/naps .

NAPS summary data are available on the mapping

niveau de protection précis pour la population en général et l'environnement, mais tient compte également des aspects liés à la faisabilité technique.

Comme les ONQAA initiaux n'ont pas été officiellement révisés en regard du nouveau cadre à deux niveaux, la démarche provisoire qui est proposée, dans la partie II du présent rapport, compare les données de 2003 aux objectifs nationaux en matière de la qualité de l'air ambiant (ONQAA) qui correspondent actuellement aux niveaux souhaitables et acceptables pour le dioxyde de soufre, le monoxyde de carbone, le dioxyde d'azote et l'ozone. Le nombre de dépassements des objectifs nationaux correspondant au niveau tolérable n'est plus présenté depuis le rapport de données de 2001.

La III[e] partie du présent rapport présente la liste des standards pancanadiens (SP) sur l'ozone et les $MP_{2.5}$ et les données pour l'année courante et les deux années précédentes à partir de la même approche statistique, comme le prévoient les standards pancanadiens. Les résultats présentés dans ce rapport ne doivent pas être interprétés comme atteignant les SP.

Les informations et les résultats qui figurent dans le présent rapport ont été fournis par les organismes du réseau NSPA. On peut obtenir de plus amples renseignements en s'adressant à la Direction générale pour l'avancement des technologies environnementales, Service de la protection de l'environnement, Environnement Canada, et aux organismes du réseau NSPA. Ce rapport est publié sur l'internet au: www.etc-cte.ec.gc.ca/naps.

INTRODUCTION

This annual report, the 34th of its kind, summarizes measurements from the National Air Pollution Surveillance (NAPS) network for the year 2003. The air monitoring stations of the NAPS network are operated by the NAPS network agencies of the federal, provincial, territorial and municipal governments. The network is coordinated by the Analysis and Air Quality Division of Environment Canada.

Part I summarizes gaseous ambient air quality data for 2003, for sulphur dioxide, carbon monoxide, nitrogen dioxide, nitric oxide and ozone.

Particulate matter (PM) data including $PM_{2.5}$ and PM_{10} (particles with aerodynamic diameters of less than 2.5 and 10 micrometers respectively) for mass, lead and sulphate are also summarized. Suspended particulate matter data are no longer being reported in the NAPS Network annual data summaries starting with this report for 2003.

The report includes data for a number of organic compounds including benzene, toluene, tetrachloroethylene, dichloromethane, 1,1,1-trichloroethane and 1,3-butadiene, from the NAPS network toxics sampling program. Organic compounds are emitted into the atmosphere from a variety of sources including vehicle exhaust, industrial operations, general solvent use and wood combustion.

National Ambient Air Quality Objectives

National ambient air quality objectives (NAAQOs) have traditionally been the benchmark against which Canada assesses the impact of anthropogenic activities on air quality and ensures that current emission control policies are protecting human health and the environment. The first Canadian NAAQOs were developed in the mid-1970s. These objectives consisted of a three-tiered approach (maximum desirable, acceptable and tolerable levels) which identified ranges of air quality with specific levels of effect.

Part II of the report compares the 2003 data with the National Air Quality Objectives. During a 1992 review of the air quality objectives it became apparent

INTRODUCTION

Le présent rapport annuel, le 34e de cette collection, présente un sommaire des mesures du Réseau national de surveillance de la pollution atmosphérique (RNSPA) pour l'année 2003. Les stations de mesure du réseau NSPA sont exploitées par les organismes du réseau NSPA soit les gouvernements fédéral, provinciaux, territoriaux, et les administrations municipales. La coordination du réseau est assurée par la Division des analyses et de la qualité de l'air d'Environnement Canada.

La partie I du rapport présente les données sommaires de 2003 sur la qualité de l'air pour le dioxyde de soufre, le monoxyde de carbone, le dioxyde d'azote, le monoxyde d'azote et l'ozone.

Les données sur les matières particulaires (MP) incluant les $MP_{2.5}$ et les MP_{10} (particules de diamètres aérodynamiques moins de 2.5 et 10 micromètres respectivement) sur la masse, le plomb et le sulfate sont aussi résumées. Les données sur les matières particulaires en suspension ne sont plus incluses dans les sommaires annuels RNSPA commençant avec ce rapport pour 2003.

Le rapport comprend des données sur un certain nombre de composés organiques comme le benzène, le toluène, le tétrachloroéthylène, le dichlorométhane, le 1,1,1-trichloroéthane et le 1,3-butadiène, provenant du programme d'échantillonnage des polluants toxiques du RNSPA. Les composés organiques sont émis dans l'atmosphère à partir de diverses sources, notamment les gaz d'échappement des véhicules, les exploitations industrielles, l'utilisation des solvants et la combustion du bois.

Objectifs nationaux de qualité de l'air ambiant

Les objectifs nationaux de qualité de l'air ambiant (ONQAA) ont été les valeurs de référence en regard desquelles le Canada évalue l'incidence des activités humaines sur la qualité de l'air et s'assure que les politiques actuelles visant à limiter les émissions contribuent réellement à protéger la santé humaine et l'environnement. Au Canada, les premiers ONQAA ont été définis au milieu des années 1970; ces objectifs consistaient en trois niveaux maximums (niveaux souhaitables, acceptables et tolérables), qui définissaient des plages de concentrations auxquelles correspondaient des effets précis.

La IIe partie du rapport compare les données de 2003 aux objectifs nationaux en matière de la qualité de l'air. Une révision des objectifs de qualité de l'air,

that many air pollutants had no effect thresholds or very low effect thresholds making the establishment of scientifically defensible effect levels difficult. The subsequent new NAAQOs framework, introduced in the data report for the year 2000, specifies two levels: a Reference Level, which is the level above which there are demonstrated effects on human health and/or the environment, and an Air Quality Objective (AQO), which is a concentration that reflects a specified level of protection for the general population and environment and which also considers aspects of technical feasibility. The air quality objectives must be consistent with the philosophy of the Canadian Environmental Protection Act (CEPA) and be based on recognized scientific principles that include risk assessment and risk management. The NAAQOs are set by the federal government based on recommendations from a National Advisory Committee and Working Group on Air Quality Objectives and Guidelines. Provincial governments have the option of adopting these either as objectives or as enforceable standards according to their legislation. The Reference Level and AQO are based on the development of an extensive Science Assessment Document (SAD) which reviews the relevant scientific evidence. The SAD and AQOs are subject to peer reviews and stakeholder consultations.

effectuée en 1992, a révélé que bon nombre de polluants atmosphériques n'avaient aucun seuil avec effet ou avaient des seuils très bas, d'où la difficulté de définir des niveaux avec effets qui soient justifiables sur le plan scientifique. Le nouveau cadre suivant pour les ONQAA qui fut introduit dans le rapport des données de l'année 2000, ne compte que deux niveaux : un niveau de référence, c'est-à-dire, le niveau au-dessus duquel on observe des effets manifestes sur la santé humaine ou l'environnement (ou les deux), et un objectif de qualité de l'air (OQA) lequel définit une concentration qui, non seulement assure un niveau de protection précis pour la population en général et l'environnement, mais tient compte également des aspects liés à la faisabilité technique. Les objectifs de qualité de l'air doivent être conformes à l'esprit de la Loi canadienne sur la protection de l'environnement (LCPE) et être fondés sur des principes scientifiques reconnus, incluant l'évaluation et la gestion des risques. Les ONQAA sont définis par le gouvernement fédéral, à la lumière des recommandations formulées par le groupe de travail sur les objectifs et lignes directrices en matière de qualité de l'air. Les gouvernements provinciaux ont ensuite le choix, soit d'adopter ces ONQAA en tant qu'objectifs, soit d'en faire des normes exécutoires par l'entremise de leur législation. Les niveaux de référence et les OQA sont basés sur un vaste document d'évaluation scientifique qui passe en revue les données scientifiques pertinentes. Les documents d'évaluation et les OQA font l'objet d'un examen par les pairs et de consultations auprès des parties concernées.

The original AQOs have not been formally revised to the new two-level system so as an interim approach, in part II, the 2003 data are compared with the existing desirable and acceptable National Ambient Air Quality Objectives (NAAQS) for sulphur dioxide, carbon monoxide, nitrogen dioxide and ozone. The number of readings exceeding the national air quality objective for the tolerable level is no longer being reported as of the 2001 data report.

Comme les OQA initiaux n'ont pas été officiellement révisés en regard du nouveau cadre à deux niveaux, la démarche provisoire qui est proposée, dans la partie II du présent rapport, consiste à comparer les données de 2003 aux objectifs nationaux de qualité de l'air ambiant (ONQAA) qui correspondent actuellement aux niveaux souhaitables et acceptables pour le dioxyde de soufre, le monoxyde de carbone, le dioxyde d'azote et l'ozone. Le nombre de dépassements des objectifs nationaux correspondant au niveau tolérable n'est plus présenté depuis le rapport de 2001.

Canada-wide Standards

In 1998, the federal and provincial governments agreed to establish Canada-wide Standards (CWS) for substances of high priority consistent with the Canada-wide Accord on Environmental Harmonization. Standards have been developed for both particulate matter ($PM_{2.5}$) and ozone.

Standards pancanadiens

En 1998, les gouvernements fédéral et provinciaux se sont engagés à établir des standards pancanadiens (SP) pour des substances hautement prioritaires en vertu de l'Accord pancanadien sur l'harmonisation environnementale. Au nombre de ces substances figurent les matières particulaires ($MP_{2.5}$) et l'ozone.

CWS have the explicit buy-in of federal and provincial governments and involve the development of jurisdictional risk management plans to attain the agreed-upon Standard. Stakeholder consultation is a fundamental aspect of the CWS process and is conducted on all aspects of the Standard and associated management plans both at the provincial and federal level.

Canada-wide Standards (CWS) for four substances were presented to Ministers in November 1999: fine particulate matter, ground-level ozone, benzene (phase 1) and mercury from incineration and smelting. Ministers ratified these standards in June 2000. Considerable additional information can be found on the Canadian Council of Ministers of the Environment (CCME) on their Internet site: www.ccme.ca/ccme.

Using the *Guidance Document on Achievement Determination*, jurisdictions are in the process of implementing and designating their monitoring stations and reporting areas for CWS achievement determination. The information presented in this report should not be related to formal achievement of the CWS. The CWS for particulate matter and ozone is to be achieved by 2010. A comprehensive report will be completed for the year 2005 and for every fifth year thereafter assessing progress on all provisions of the CWSs including assessment of ambient levels and trends and identification of communities where ambient levels are exceeding or approaching the CWS levels.

The Canada-wide Standard for PM is focused on the fine fraction of PM, smaller than 2.5 microns, known as $PM_{2.5}$. The recommended Standard for $PM_{2.5}$ is 30 $\mu g/m^3$ averaged over 24 hour periods, to be achieved by 2010. Achievement is to be based on the 98th percentile ambient measurement annually, averaged over 3 consecutive years. The recommended Canada-wide Standard for Ozone is 65 ppb averaged over 8 hour periods, to be achieved by 2010. Achievement is to be based on the 4th highest measurement annually averaged over 3 consecutive years.

Part III of this report lists the Canada-wide Standards and reports data for ozone and $PM_{2.5}$ for 2001, 2002 and 2003 with a 3 year average of air quality levels as prescribed by the CWS.

Les gouvernements fédéral et provinciaux souscrivent formellement aux SP, lesquelles requièrent l'élaboration par les instances concernées, des plans de gestion des risques en vue d'atteindre les standards prescrits. La consultation des parties intéressées est un volet fondamental du processus d'élaboration des SP, et cette consultation porte sur tous les aspects des standards et sur les plans de gestion qui s'y rattachent, tant au niveau provincial que fédéral.

En novembre 1999, des standards pancanadiens ont été présentées aux Ministres relativement aux quatre substances suivantes: matières particulaires fines, ozone troposphérique, benzène (volet 1) et mercure provenant des incinérateurs et des fonderies de métaux. Les Ministres ont ratifié ces standards en juin 2000 pour plus d'informations, veuillez consulter le Conseil canadien des ministres de l'environnement (CCME) sur l'internet au: www.ccme.ca/ccme.

À l'aide du *Guide pour la détermination de l'atteinte des standards pancanadiens*, les diverses instances sont sur le point d'implanter et de désigner leurs stations de surveillance et leurs régions assujetties au rapport pour déterminer l'atteinte des SP. Les résultats présentés dans le présent rapport ne doivent pas être interprétés comme atteignant les SP. Les SP pour les matières particulaires et l'ozone doivent être atteintes d'ici 2010. Un rapport complet sera rédigé d'ici 2005 et à tous les cinq ans par la suite pour évaluer les progrès réalisés au sujet de toutes les dispositions des SP, notamment l'évaluation des concentrations ambiantes, les tendances et l'identification des agglomérations où les niveaux ambiants dépassent ou approchent les SP.

Le standard pancanadien relatif aux matières particulaires (MP) s'applique à la fraction fine des MP ayant un diamètre inférieur à 2,5 microns ($MP_{2,5}$). Le standard recommandé pour les $MP_{2,5}$ – lequel doit être atteint d'ici 2010 – est de 30 µg/m3 (moyenne de mesure sur 24 h). L'atteinte de cet objectif sera déterminé en fonction de la moyenne de la valeur du 98^e percentile, mesurée chaque année durant trois années consécutives. Dans le cas de l'ozone, le standard pancanadien à atteindre d'ici 2010 est de 65 ppb (moyenne sur une période de mesure sur 8 h). L'atteinte de cet objectif sera déterminé en fonction de la moyenne de la quatrième mesure la plus élevée déterminée chaque année durant trois années consécutives.

La III^e partie du présent rapport présente la liste des nouveaux standards pancanadiens assortis de données sur l'ozone et les $MP_{2,5}$ pour 2001, 2002 et 2003, ainsi qu'une moyenne sur trois ans des niveaux en matière de la qualité de l'air, comme le prévoient les SP.

NAPS Network

The National Air Pollution Surveillance (NAPS) network was established jointly in 1970 by the federal, provincial and municipal governments. In 2003, the network consisted of 239 stations in 145 urban areas and the following instruments:

Continuous Monitors	644
Sulphur Dioxide	96
Carbon Monoxide	73
Nitrogen Dioxide	110
Ozone	169
PM_{10}	58
$PM_{2.5}$	138
Samplers	96
PM_{10} high-volume	20
PM_{10} low-volume	28
Organic compounds	48

The Environmental Technology Centre plays a major role in collecting and assessing ambient air quality data in Canada. Originally, the NAPS network program concentrated on monitoring the criteria pollutants. These continue to be a priority. Data support major issues such as the Plan of Action for cleaner vehicles, engines and fuels, the Canada-U.S. Air Quality Accord and the Canada-wide Acid Rain Strategy. The criteria pollutants, however, are not the only air pollutants of concern in Canada.

Environment Canada, with assistance from the NAPS network agencies of the provincial and municipal governments, began an inhalable particulate monitoring program in May 1984 for particles less than 10 µm (defined as PM_{10}) and particles less than 2.5 µm (defined as $PM_{2.5}$). Dichotomous (Dichot) samplers and size-selective inlet samplers (SSIs) were used. Filters from dichotomous samplers are currently analysed for 50 elements, 14 inorganic and organic ions, and 11 inorganic cations.

Since 1988, the Analysis and Air Quality Division of the Environmental Technology Centre has been developing new techniques to measure potentially toxic air contaminants. With assistance from NAPS network agencies, these improved techniques have

Le Réseau NSPA

Le Réseau national de surveillance de la pollution atmosphérique (RNSPA) a été mis sur pied en 1970 conjointement par les gouvernements fédéral, provinciaux et municipaux. En 2003, il se composait de 239 stations situées dans 145 milieux urbains utilisantm les appareils suivants:

Moniteurs en continu	644
Dioxyde de soufre	96
Monoxyde de carbone	73
Dioxyde d'azote	110
Ozone	169
MP_{10}	58
$MP_{2.5}$	138
Échantillonneurs	96
MP_{10} haut débit	20
MP_{10} faible débit	28
Composés organiques	48

Le Centre de technologie environnementale joue un rôle important dans la collecte et l'évaluation des données sur la qualité de l'air au Canada. Au début, le programme du réseau NSPA portait surtout sur la mesure des polluants pour lesquels il existait des objectifs nationaux, et ces mêmes mesures restent une priorité. Les données constituent un outil important pour certains programmes dont le plan d'action pour les véhicules, les moteurs et les carburants propres, l'accord Canada-États-Unis sur la qualité de l'air et la stratégie pancanadienne sur les émissions acifiifiantes. Ces polluants de référence ne sont pas, cependant, les seuls polluants atmosphériques qui affectent le Canada.

En mai 1984, Environnement Canada, avec la collaboration des organismes du réseau NSPA des gouvernements provinciaux et des administrations municipales, mettait sur pied un programme de mesure des particules inhalées de moins de 10 microns (MP_{10}) et des particules de moins de 2,5 microns ($MP_{2.5}$). On a utilisé des échantillonneurs dichotomiques (Dichot) et des échantillonneurs à tête sélective (SSI). L'analyse des filtres des échantillonneurs dichotomiques porte actuellement sur 50 éléments, 14 ions organiques et inorganiques et 11 cations inorganiques.

Depuis 1988, la Division des analyses et de la qualité de l'air du Centre de technologie environnementale met au point de nouvelles techniques de mesure de divers polluants atmosphériques potentiellement toxiques. Avec l'appui des organismes du réseau

been used to monitor volatile organics (aromatics, aldehydes and ketones) and semi-volatile organics (PAHs, dioxins and furans). A number of reports show results from the air toxics monitoring program for selected species.

NSPA, on a effectué un suivi des composés organiques volatils (composés aromatiques, aldéhydes et cétones) et semi-volatils (HAPs, dioxines et furanes) en ayant recours à ces techniques améliorées. Les résultats obtenus pour certaines espèces grâce au programme de suivi des composés atmosphériques toxiques figurent dans un certain nombre de rapports.

Measurements from the Network

NAPS network agencies' quality assurance and quality control programs are supplemented by a federal quality assurance program. These programs ensure that the ambient air monitoring data collected from NAPS stations are valid, complete, comparable, representative and accurate. Elements of the network QA program described in a report include: site selection; sampling system requirements; site and analyzer operation; instrument calibration and reference standards; inter-laboratory testing and performance audit program; data validation and reporting; documentation; training and technical support.

Mesures sur la qualité de l'air provenant du réseau

Les programmes d'assurance et de contrôle de la qualité des organismes du réseau NSPA sont complétés par un programme fédéral d'assurance de la qualité. Ces programmes font en sorte que les données sur la qualité de l'air qui proviennent du réseau soient valides, complètes, comparables, représentatives et exactes. Les éléments du programme d'assurance-qualité du réseau décrits dans un rapport récent portent sur le choix du site, les exigences relatives au système de prélèvement, le fonctionnement du site et de l'analyseur, l'étalonnage des appareils et les étalons de référence, le programme de vérification du rendement et d'essais interlaboratoires, la validation et la publication des données, la documentation, la formation et le soutien technique.

The methods used to measure pollutants for which national air quality objectives exist (sulphur dioxide, carbon monoxide, nitrogen dioxide and ozone) have been designated as "reference methods" or "equivalent methods" by the United States Environmental Protection Agency (EPA). Methods are strictly governed by operation or instruction manuals and applicable quality assurance procedures. Calibration standards used in the NAPS network are certified traceable to United States National Institute of Standards and Technology (NIST) primary standards.

Les méthodes de mesure des polluants pour lesquels des objectifs nationaux ont été promulgués (dioxyde de soufre, monoxyde de carbone, dioxyde d'azote et ozone) ont été désignées comme des « méthodes de références » ou « méthodes équivalentes » par l'*Environmental Protection Agency* (EPA) des États-Unis. Elles suivent exactement les prescriptions du manuel de l'usager ou d'instructions et les procédures pertinentes d'assurance qualité. Les étalons utilisés dans le réseau NSPA sont certifiés conformes aux étalons primaires du National Institute of Standards and Technology (NIST) des États-Unis.

Network Ambient Air Quality Data

NAPS data are validated using automated and manual procedures. Data from network agencies are converted to a NAPS compatible format and then entered in the NAPS database. Although the agency data analyst has validated the data, they are also submitted to tests outlined by the United States Environmental Protection Agency. When data are flagged automatically or manually, the relevant agency must confirm the data before they are stored in the NAPS database.

Données du réseau sur la qualité de l'air ambiant

Les données du réseau NSPA sont validées au moyen de procédures automatisées et manuelles. Les données fournies par les organismes du réseau sont converties dans un format compatible avec le réseau, puis saisies dans la banque de données du RNSPA. Bien que l'analyste de l'organisme ait validé les données, celles-ci sont soumises à des tests qui ont été définis par l'*Environmental Protection Agency* des États-Unis. Lorsque des données sont signalées par les tests automatisés ou par les vérifications manuelles, l'organisme en question doit les confirmer avant

Air monitoring data indicate pollution levels only at sampling sites and may not necessarily represent community-wide air quality. Community-wide comparisons can only be made by using data from all available sampling stations in a city and interpreting them on the basis of specific monitoring site characteristics.

Data analysis is not attempted in this report; however, detailed reviews and trend analyses of data from the NAPS network are found in a number of published reports and data files are available on request.

This report is published on the Internet site: www.etc-cte.ec.gc.ca/naps.

A report reviewing air quality data for the year 2001 and trends for 1990-2001 was published by the Analysis and Air Quality Division (September 2004) and is available on the NAPS Internet site: www.etc-cte.ec.gc.ca/naps .

qu'elles soient versées dans la banque de données du RNSPA.

Les données sur la qualité de l'air représentent uniquement les niveaux de pollution aux stations et pas nécessairement la qualité de toute l'atmosphère dans une agglomération. Pour faire des comparaisons entre villes, on devrait utiliser les données de toutes les stations d'échantillonnage de chacune des villes et les interpréter selon les particularités des sites de mesure.

Dans ce rapport, nous n'avons pas tenté d'analyser les données. On trouvera des études détaillées et des analyses de tendances sur les données du réseau NSPA dans un certain nombre de rapports. Des fichiers de données sont disponibles sur demande.

Ce rapport est aussi publié sur l'internet au: www.etc-cte.ec.gc.ca/naps.

Un rapport passant en revue les données de la qualité de l'air de l'année 2001 et les tendances pour 1990-2001 a été publié par la Division des analyses et de la qualité de l'air (Septembre 2004) et est disponible sur l'internet au: www.etc-cte.ec.gc.ca/naps.

Description of NAPS Network Instrumentation

Pollutant	Detection Principle / Analytical Method	Units of Measurement	Minimum Reported Concentration	Type of Monitoring
Sulphur Dioxide	Ultraviolet fluorescence	ppb	1 ppb	Continuous (1 hour means)
Carbon Monoxide	Non-dispersive infrared spectrometry	ppm	0.1 ppm	Continuous (1 hour means)
Nitrogen Dioxide and Nitric Oxide	Chemiluminescence	ppb	1 ppb	Continuous (1 hour means)
Ozone	Ultraviolet photometry or Chemiluminescence	ppb	1 ppb	Continuous (1 hour means)
PM_{10} and $PM_{2.5}$	Inertial mass or Beta attenuation	$\mu g/m^3$	1 $\mu g/m^3$	Continuous (1 hour means)
PM_{10} and $PM_{2.5}$	Gravimetry	$\mu g/m^3$	1 $\mu g/m^3$	Manual (24 hour sample)
PM_{10} and $PM_{2.5}$ – Lead	X-ray Fluorescence	$\mu g/m^3$	0.001 $\mu g/m^3$	Manual (24 hour sample)
PM_{10} and $PM_{2.5}$ – Sulphate	Ion Chromatography	$\mu g/m^3$	0.1 $\mu g/m^3$	Manual (24 hour sample)
Organic Compounds	Gas Chromatography/ Mass Spectrometry	$\mu g/m^3$	0.05 $\mu g/m^3$	Manual (24 hour sample)

ppm = parts per million by volume
ppb = parts per billion by volume
$\mu g/m^3$ = micrograms per cubic metre

Description des instruments du réseau NSPA

Polluant	Principe de détection / Méthode analytique	Unités de mesure	Concentration minimale rapportée	Type de mesure
Dioxyde de soufre	Fluorescence UV	ppb	1 ppb	Continue (moyenne d'une heure)
Monoxyde de carbone	Spectrométrie d'absorption non dispersive dans l'infrarouge	ppm	0,1 ppm	Continue (moyenne d'une heure)
Dioxyde d'azote et monoxyde d'azote	Chimiluminescence	ppb	1 ppb	Continue (moyenne d'une heure)
Ozone	Chimiluminescence ou Photométrie UV	ppb	1 ppb	Continue (moyenne d'une heure)
MP_{10} et $MP_{2,5}$	Masse d'inertie	$\mu g/m^3$	1 $\mu g/m^3$	Continue (moyenne d'une heure)
MP_{10} et $MP_{2,5}$	Gravimétrie	$\mu g/m^3$	1 $\mu g/m^3$	Manuelle (échantillon de 24 heures)
Plomb MP_{10} et $MP_{2,5}$	Fluorescence par rayons-X	$\mu g/m^3$	0,001 $\mu g/m^3$	Manuelle (échantillon de 24 heures)
Sulfate MP_{10} et $MP_{2,5}$	Chromatographie d'ions	$\mu g/m^3$	0,1 $\mu g/m^3$	Manuelle (échantillon de 24 heures)
Composés Organiques	Chromatographie gazeuse/ spectrométrie de masse	$\mu g/m^3$	0,05 $\mu g/m^3$	Manuelle (échantillon de 24 heures)

ppm = parties par million (volume)
ppb = parties par milliard (volume)
$\mu g/m^3$ = microgrammes par metre cube

Statistical Parameters for Continuous Measurements

Statistical Parameter	Sulphur Dioxide	Carbon Monoxide	Nitrogen Dioxide	Nitric Oxide	Ozone	PM_{10} $PM_{2.5}$
Frequency Distribution, Hourly Values	*	*	*	*	*	*
Frequency Distribution, 8-h Running Means		*			*	
Frequency Distribution, 24-h Running Means	*	*	*	*	*	*
Maximum Hourly Value	*	*	*	*	*	*
Maximum 8-h Running Mean		*			*	
Maximum 24-h Running Mean	*	*	*	*	*	*
Monthly Arithmetic Mean	*	*	*	*	*	*
Annual Arithmetic Mean	*	*	*	*	*	*
Standard Deviation of 1-h Values	*	*	*	*	*	*
Percentage Data Availability, 1-h Values	*	*	*	*	*	*
Percentage Data Availability, 8-h Means		*			*	
Percentage Data Availability, 24-h Means	*	*	*	*	*	*

Monthly or Annual means are not calculated unless at least 50% of the hourly observations are available for the period concerned. Furthermore, the annual mean is not calculated unless monthly means are reported for at least two months in each quarter. The 8-h and 24-h running means are not calculated unless 75% of the hourly observations are available.

Paramètres statistiques pour les mesures en continu

Paramètre statistique	Dioxyde de soufre	Monoxyde de carbone	Dioxyde d'azote	Monoxyde d'azote	Ozone	MP_{10} $MP_{2,5}$
Distribution des fréquences, concentrations horaires	*	*	*	*	*	*
Distribution des fréquences, moyennes mobiles de 8 heures		*			*	
Distribution des fréquences, moyennes mobiles de 24 heures	*	*	*	*	*	*
Concentration maximale Horaire	*	*	*	*	*	*
Moyenne mobile maximale de 8 heures		*			*	
Moyenne mobile maximale de 24 heures	*	*	*	*	*	*
Moyenne arithmétique mensuelle	*	*	*	*	*	*
Moyenne arithmétique annuelle	*	*	*	*	*	*
Écart-type des concentrations horaires	*	*	*	*	*	*
Pourcentage de données disponibles, concentrations horaires	*	*	*	*	*	*
Pourcentage de données disponibles, moyennes de 8 heures		*			*	
Pourcentage de données disponibles, moyennes de 24 heures	*	*	*	*	*	*

Les moyennes mensuelles ou annuelles ne sont calculées que si au moins 50% des observations horaires sont disponibles pour la période considérée. En outre, la moyenne annuelle n'est calculée que si l'on possède au moins deux moyennes mensuelles pour chaque trimestre. Les moyennes continues de 8 heures et de 24 heures ne sont calculées que si 75% des observations horaires sont disponibles.

Statistical Parameters for 24-Hour Measurements

Statistical Parameter	PM, Lead and Sulphate	Volatile Organic Compounds
Frequency Distribution, 24-hour Values	*	*
Annual Minimum, 24-hour Values	*	*
Annual Maximum, 24-hour Values	*	*
Annual Geometric Mean		
Geometric Standard Deviation		
Annual Arithmetic Mean	*	*
Standard Deviation	*	*
Number of Valid Samples for the Year	*	*

Paramètres statistiques pour les mesures sur 24 heures

Statistiques	MP, plomb et sulfate	Composés organiques volatiles
Distribution des fréquences, concentrations de 24 heures	*	*
Valeurs annuelles minimales de 24 heures	*	*
Valeurs annuelles maximales de 24 heures	*	*
Moyenne géométrique annuelle		
Écart-type géométrique		
Moyenne arithmétique annuelle	*	*
Écart-type	*	*
Nombre d'échantillons valables obtenus durant l'année	*	*

Pollutants Measured in the NAPS Network

Following is a summary of pollutants measured in the NAPS network including start and end years of the data archived in the NAPS database.

Pollutants Measured in the NAPS Network

Gases – 1 Hour (ppb)

Sulphur Dioxide 1974-2003
Nitrogen Dioxide 1974-2003
Carbon Monoxide (ppm) 1974-2003
Nitric Oxide 1980-2003
Ozone 1974-2003
Nitrogen Oxides 1980-2003

Particulate Matter – 1 Hour ($\mu g/m^3$)

Particulate Matter (2.5u) $PM_{2.5}$ 1995-2003
Soiling Index 1974-1997
Particulate Matter(10u) PM_{10} 1992-2003

Particulate Matter – 24 Hours ($\mu g/m^3$)

Suspended Particulate Matter SPM 1974-2002
Suspended Particulate Sulphate SPL 1974-1998
Particulate Lead $PL_{2.5}$ 1984-2003
Particulate Lead PL_{10} 1984-2003
Suspended Particulate Lead SPL 1974-1998
Particulate Matter PM_{10} 1984-2003
Particulate Sulphate $PS_{2.5}$ 1984-2003
Particulate Sulphate PS_{10} 1984-2003

Particulate Matter - 1 Month

Dustfall (g/m^2/30days) 1974-1989
Sulphation ($mg/100cm^2$/day) 1974-1989

Particulate Matter - 24 Hours ($\mu g/m^3$)

PM_{10} $PM_{2.5}$ Anions and Cations, Metals 1984-2003

Pollutants listed below in italics are discussed in trends reports and the pollutants underlined are reported in this annual data summary.

Acetate
Antimony
Bismuth
Cadmium
Cesium
Chromium
Fluoride
Germanium
Iron
Magnesium
Molybdenum
Niobium
Oxalate
Phosphate
Praseodymium
Selenium
Sodium
Sulphur
Thallium
Tungsten
Zinc
Aluminum
Arsenic
Bromide
Calcium
Chloride
Cobalt
Formate
Indium
Lanthanum
Manganese
Neodymium
Nitrate
Palladium
Phosphorus
Rubidium
Silicon
Strontium
Tantulum
Tin
Vanadium
Zirconium
Ammonium
Barium
Bromine
Cerium
Chlorine
Copper
Gallium
Iodine
Lead
Mercury
Nickel
Nitrite
Particulate $PM_{2.5}$ & PM_{10}
Potassium
Scandium
Silver
Sulphate
Tellurium
Titanium
Yttrium

Volatile Organic Compounds ($\mu g/m^3$) 1989-2003

1,1,1-Trichloroethane
1,1-Dichloroethane
1,2,3-Trimethylbenzene
1,2-Dichlorobenzene
1,2-Diethylbenzene
1,3-Dichlorobenzene
1,4-Dichlorobutane
1-Butene/Isobutene
1-Heptene
1-Methylcyclopentene
1-Pentene
2,2,4-Trimethylpentane
2,2-Dimethylhexane
1,1,2,2-Tetrachloroethane
1,1-Dichloroethylene
1,2,4-Trichlorobenzene
1,2-Dichloroethane
1,3,5-Trimethylbenzene
1,3-Diethylbenzene
1,4-Diethylbenzene
1-Butyne
1-Hexene
1-Nonene
1-Propyne
2,2,5-Trimethylhexane
2,2-Dimethylpentane
1,1,2-Trichloroethane
1,2 Dibromoethane
1,2,4-Trimethylbenzene
1,2-Dichloropropane
1,3-Butadiene
1,4-Dichlorobenzene
1-Butene
1-Decene
1-Methylcyclohexene
1-Octene
2,2,3-Trimethylbutane
2,2-Dimethylbutane
2,2-Dimethylpropane

2,3,4-Trimethylpentane
2,4-Dimethylhexane
2,5-Dimethylheptane
2-Ethyltoluene
2-Methyl-2-Butene
2-Methylhexane
3,6-Dimethyloctane
3-Methylheptane
3-Methylpentane
Acetone
Alpha-Pinene
Beta-Pinene
Bromoform
Butane
Chloroethane
cis-1,2-Dichloroethylene
cis-1,3-Dimethylcyclohexane
cis-2-Hexene
cis-3-Heptene
Crotonaldehyde
Cyclopentane
Delta-Limonene
Dichloromethane
Ethylbenzene
Formaldehyde
Freon 12
Hexachlorobutane
Hexylbenzene
Iso-Butylbenzene
Iso-Propylbenzene
Methyl Ethyl Ketone
m-Tolualdehyde
Nonane
o-Tolualdehyde
Pentane
Propylene
Styrene
Toluene
trans-1,2-Dimethylcyclohexane
trans-1,4-Dimethylcyclohexane
trans-2-Hexene
trans-3-Heptene
Trichloroethylene

2,3-Dimethylbutane
2,4-Dimethylpentane
2,5-Dimethylhexane
2-Methyl-1-Butene
2-Methyl-2-Pentene
2-Methylpentane
3-Ethyltoluene
3-Methylhexane
4-Ethyltoluene
Acetylene
Benzaldehyde
Bromochloromethane
Bromomethane
Carbontetrachloride
Chloroform
cis-1,2-Dimethylcyclohexane
cis-2-Butene
cis-2-Octene
cis-3-Methyl-2-Pentene
Cyclohexane
Cyclopentene
Dibromochloromethane
Dodecane
Ethylbromide
Freon 11
Freon 22
Hexanal
Indane
Isopentane
Isovaleraldehyde
Methyl Iso-Butyl Ketone
Naphthalene
N-Propylbenzene
o-Xylene
Propane
p-Tolualdehyde
tert-Butylbenzene
trans & cis-1,3-Dichloropropene
trans-1,3-Dichloropropene
trans-2-Butene
trans-2-Octene
trans-3-Methyl-2-Pentene
Undecane

2,3-Dimethylpentane
2,5-Dimethylbenzaldehyde
2-Ethyl-1-Butene
2-Methyl-1-Pentene
2-Methylheptane
2-Pentanal
3-Methyl-1-Pentene
3-Methyloctane
4-Methyl-1-Pentene
Acrolein
Benzene
Bromodichloromethane
Bromotrichloromethane
Chlorobenzene
Chloromethane
cis-1,3-Dichloropropene
cis-2-Heptene
cis-2-Pentene
cis-4-Methyl-2-Pentene
Cyclohexene
Decane
Dibromomethane
Ethane
Ethylene
Freon 114
Heptane
Hexane
Isobutane
Isoprene
m and p-Xylene
Methylcyclopentane
N-Butylbenzene
Octane
p-Cymene
Propionaldehyde
sec-Butylbenzene
Tetrachloroethylene
trans-1,2-Dichloroethylene
trans-1,3-Dimethylcyclohexane
trans-2-Heptene
trans-2-Pentene
trans-4-Methyl-2-Pentene
Vinylchloride

Semi-volatile Organic Compounds ($\mu g/m^3$) 1989-2003

1-Methylpyrene
7-Methylbenzo(a)anthracene
Anthanthrene
Benzo(a)anthracene
Benzo(b)chrysene
Benzo(e)pyrene
Chrysene
Fluorene
Phenanthrene

2-Methylfluorene
Acenaphthene
Anthracene
Benzo(a)fluorine
Benzo(b)fluoranthene
Benzo(ghi)fluoranthene
Dibenzo(ah)anthracene
Indeno Pyrene
Pyrene

3-Methylcholanthrene
Acenaphthylene
Benzo (k)fluoranthene
Benzo(a)pyrene
Benzo(b)fluorene
Benzo(ghi)perylene
Fluoranthene
Perylene
Triphenylene

Semi-volatile Organic Compounds (fg/m^3-TEQ) 1989-2003

Polychlorodibenzo-p-dioxin
1,6-Dinitropyrene
1-Nitrobenzo(a)pyrene
2-Nitroanthracene
2-Nitrofluorene
3-Nitrobenzo(e)pyrene
4-Nitropyrene
6-Nitrochrysene
9-Nitroanthracene
Hexachlorobenzene
Total Nitro-C13
Total Nitro-C18

Polychlorodibenzofuran
1,8-Dinitropyrene
1-Nitrobenzo(e)pyrene
2-Nitrobenzo(a)pyrene
2-Nitropyrene
3-Nitrofluoranthene
6-Nitro-3,4-benzocoumarin
7-Nitro-12-methylbenzo(a)anthracene
9-Nitrodibenzo(a,c)anthracene
Octachlorostyrene
Total Nitro-C14
Total Nitro-C20

1,3-Dinitropyrene
12-Ethyl-6-nitrochrysene
1-Nitropyrene
2-Nitrofluoranthene
3-Nitrobenzo(a)pyrene
4-Nitrobenzo(e)pyrene
6-Nitrobenzo(a)pyrene
7-Nitrobenz(a)anthracene
9-Nitrophenanthrene
Pentachlorophenol
Total Nitro-C16
Total Nitro-C22

Polluants mesurés dans le Réseau NSPA

Ci-dessous est un résumé des polluants mesurés dans le RNSPA incluant les années dont les données sont archivées dans la base de données du RNSPA.

Polluants mesurés dans le Réseau NSPA

Gaz – Mesure sur 1 h (ppb)

Dioxyde de soufre 1974-2003
Monoxyde de carbone (ppm) 1974-2003
Ozone 1974-2003
Dioxyde d'azote 1974-2003
Monoxyde d'azote 1980-2003
Oxydes d'azote 1980-2003

Matières particulaires – Mesure sur 1 h (µg/m³)

Matières particulaires (2.5) $MP_{2.5}$ 1995-2003
Matières particulaires (10u) MP_{10} 1992-2003
Indice de souillure 1974-1997

Matières particulaires – Mesure sur 24 h (µg/m³)

Matières particulaires en suspension MPS 1974-2002
Plomb particulaire en suspension 1974-1998
Sulfate particulaire en suspension 1974-1998
Matières particulaires (10u) MP_{10} 1984-2003
Plomb particulaire $PP_{2.5}$ 1984-2003
Plomb particulaire PP_{10} 1984-2003
Sulfate particulaire $SP_{2.5}$ 1984-2003
Sulfate particulaire SP_{10} 1984-2003

Matières particulaires – Mesure sur 1 mois

Poussières (g/m²/30 jours) 1974-1989
Sulfatation (mg/100cm²/jour) 1974-1989

Matières particulaires – Mesure sur 24 h (µg/m³)

$PM_{2.5}$, PM_{10}, anions et cations, métaux 1984-2003
Les polluants en italique ci-dessous sont présentés dans des rapports traitant des tendances et les polluants qui sont soulignés sont inclus dans ce rapport.

Acétate
Aluminium
Ammonium
Antimoine
Arsenic
Baryum
Bismuth
Bromure
Brome
Cadmium
Calcium
Cérium
Césium
Chlorure
Chlore
Chrome
Cobalt
Cuivre
Fluorure
Formate

Tétrachloroéthylène
trans-1,2-Dichloroéthylène
trans-1,3-Diméthylcyclohexane
trans-2-Heptène
trans-2-Pentène
trans-4-Méthyl-2-Pentène
Chlorure de vinyle

Composés organiques semi-volatils ($\mu g/m^3$) 1989-2003

1-Méthylpyrène
7-Méthylbenzo(a)anthracène
Anthanthrène
Benzo(a)anthracène
Benzo(b)chrysène
Benzo(e)pyrène
Chrysène
Fluorène
Phénanthrène

2-Méthylfluorène
Acénaphtène
Anthracène
Benzo(a)fluorène
Benzo(b)fluoranthène
Benzo(ghi)fluoranthène
Dibenzo(ah)anthracène
Indénopyrène
Pyrène

3-Méthylcholanthrène
Acénaphtylène
Benzo (k)fluoranthène
Benzo(a)pyrène
Benzo(b)fluorène
Benzo(ghi)pérylène
Fluoranthène
Perylène
Triphénylène

Composés organiques semi-volatils (fg/m^3 – équivalents toxiques) 1989-2003

Dibenzo-*p*-dioxines polychlorées
1,6-Dinitropyrène
1-Nitrobenzo(a)pyrène
2-Nitroanthracène
2-Nitrofluorène
3-Nitrobenzo(e)pyrène
4-Nitropyrène
6-Nitrochrysène
9-Nitroanthracène
Hexachlorobenzène
Nitro-C13 total
Nitro-C18 total

Dibenzofurannes polychlorés
1,8-Dinitropyrène
1-Nitrobenzo(e)pyrène
2-Nitrobenzo(a)pyrène
2-Nitropyrène
3-Nitrofluoranthène
6-Nitro-3,4-benzocoumarine
7-Nitro-12-méthylbenzo(a)anthracène
9-Nitrodibenzo(a,c)anthracène
Octachlorostyrène
Nitro-C14 total
Nitro-C20 total

1,3-Dinitropyrène
12-Éthyl-6-nitrochrysène
1-Nitropyrène
2-Nitrofluoranthène
3-Nitrobenzo(a)pyrène
4-Nitrobenzo(e)pyrène
6-Nitrobenzo(a)pyrène
7-Nitrobenz(a)anthracène
9-Nitrophénanthrène
Pentachlorophénol
Nitro-C16 total
Nitro-C22 total

PART II

COMPARISON OF 2003 DATA WITH NATIONAL AIR QUALITY OBJECTIVES

IIe PARTIE

COMPARAISONS DES DONNÉES DE 2003 AVEC LES OBJECTIFS NATIONAUX DE LA QUALITÉ DE L'AIR

National Air Quality Objectives*

Air Contaminant	Maximum Desirable Level	Maximum Acceptable Level
Sulphur Dioxide		
Annual arithmetic mean	30 $\mu g/m^3$ (0.01 ppm)	60 $\mu g/m^3$ (0.02 ppm)
Average concentration over a 24-h period	150 $\mu g/m^3$ (0.06 ppm)	300 $\mu g/m^3$ (0.11 ppm)
Average concentration over a 1-h period	450 $\mu g/m^3$ (0.17 ppm)	900 $\mu g/m^3$ (0.34 ppm)
Suspended Particulate Matter		
Annual geometric mean	60 $\mu g/m^3$	70 $\mu g/m^3$
Average concentration over a 24-h period		120 $\mu g/m^3$
Carbon Monoxide		
Average concentration over a 8-h period	6 mg/m^3 (5 ppm)	15 mg/m^3 (13 ppm)
Average concentration over a 1-h period	15 mg/m^3 (13 ppm)	35 mg/m^3 (31 ppm)
Oxidants (Ozone)		
Average concentration over a 1-h period	100 $\mu g/m^3$ (0.05 ppm)	160 $\mu g/m^3$ (0.08 ppm)
Nitrogen Dioxide		
Annual arithmetic mean	60 $\mu g/m^3$ (0.03 ppm)	100 $\mu g/m^3$ (0.05 ppm)
Average concentration over a 1-h period		400 $\mu g/m^3$ (0.21 ppm)

* Conditions of 25°C and 101 kPa are used as the basis for conversion from ug/m^3 to ppm.

Objectifs nationaux de la qualité de l'air*

Contaminant atmosphérique	Niveau maximal souhaitable	Niveau maximal acceptable
Dioxyde de soufre		
Moyenne arithmétique annuelle	30 µg/m³ (0.01 ppm)	60 µg/m³ (0.02 ppm)
Concentration moyenne sur 24 heures	150 µg/m³ (0.06 ppm)	300 µg/m³ (0.11 ppm)
Concentration moyenne sur 1 heure	450 µg/m³ (0.17 ppm)	900 µg/m³ (0.34 ppm)
Matières particulaires en suspension		
Moyenne géometrique annuelle	60 µg/m³	70 µg/m³
Concentration moyenne sur 24 heures		120 µg/m³
Monoxyde de carbone		
Concentration moyenne sur 8 heures	6 mg/m³ (5 ppm)	15 mg/m³ (13 ppm)
Concentration moyenne sur 1 heure	15 mg/m³ (13 ppm)	35 mg/m³ (31 ppm)
Oxydants (Ozone)		
Concentration moyenne sur 1 heure	100 µg/m³ (0.05 ppm)	160 µg/m³ (0.08 ppm)
Dioxyde d'azote		
Moyenne arithmétique annuelle	60 µg/m³ (0.03 ppm)	100 µg/m³ (0.05 ppm)
Concentration moyenne sur 1 heure		400 µg/m³ (0.21 ppm)

* Conversion des µg/m³ en ppm à la température de 25°C et à la pression de 101kPa.

CANADA-WIDE STANDARDS

STANDARDS PANCANADIENS

Canada-wide Standards* for Particulate Matter and Ozone

Pollutant	Averaging Period	Standard	Year to be Achieved	Comments
$PM_{2.5}$	24 hours	30 $\mu g/m^3$	2010	Achievement based on the 98th percentile measurement annually, averaged over 3 consecutive years
Ozone	8 hours	65 ppb	2010	Achievement based on the 4th highest measurement annually, averaged over 3 consecutive years

* These Canada-wide Standards (CWSs) were established pursuant to the 1998 Canada-wide Accord on Environmental Harmonization of the Canadian Council of Ministers of the Environment and its Canada-Wide Environmental Standards Sub-Agreement. **The information presented in this report is strictly preliminary and should not be construed as achievement of the CWS**. The CWS for particulate matter and ozone is to be achieved by 2010. A comprehensive report will be completed for the year 2005 and for every fifth year thereafter assessing progress on all provisions of the CWSs including assessment of ambient levels and trends and identification of communities where ambient levels are exceeding or approaching the CWS levels.

$PM_{2.5}$ refers to airborne particles that are 2.5 micrometers or less in diameter.

Ozone refers to an oxygen compound (O_3) occurring the form of a gas in the atmosphere at ground level.

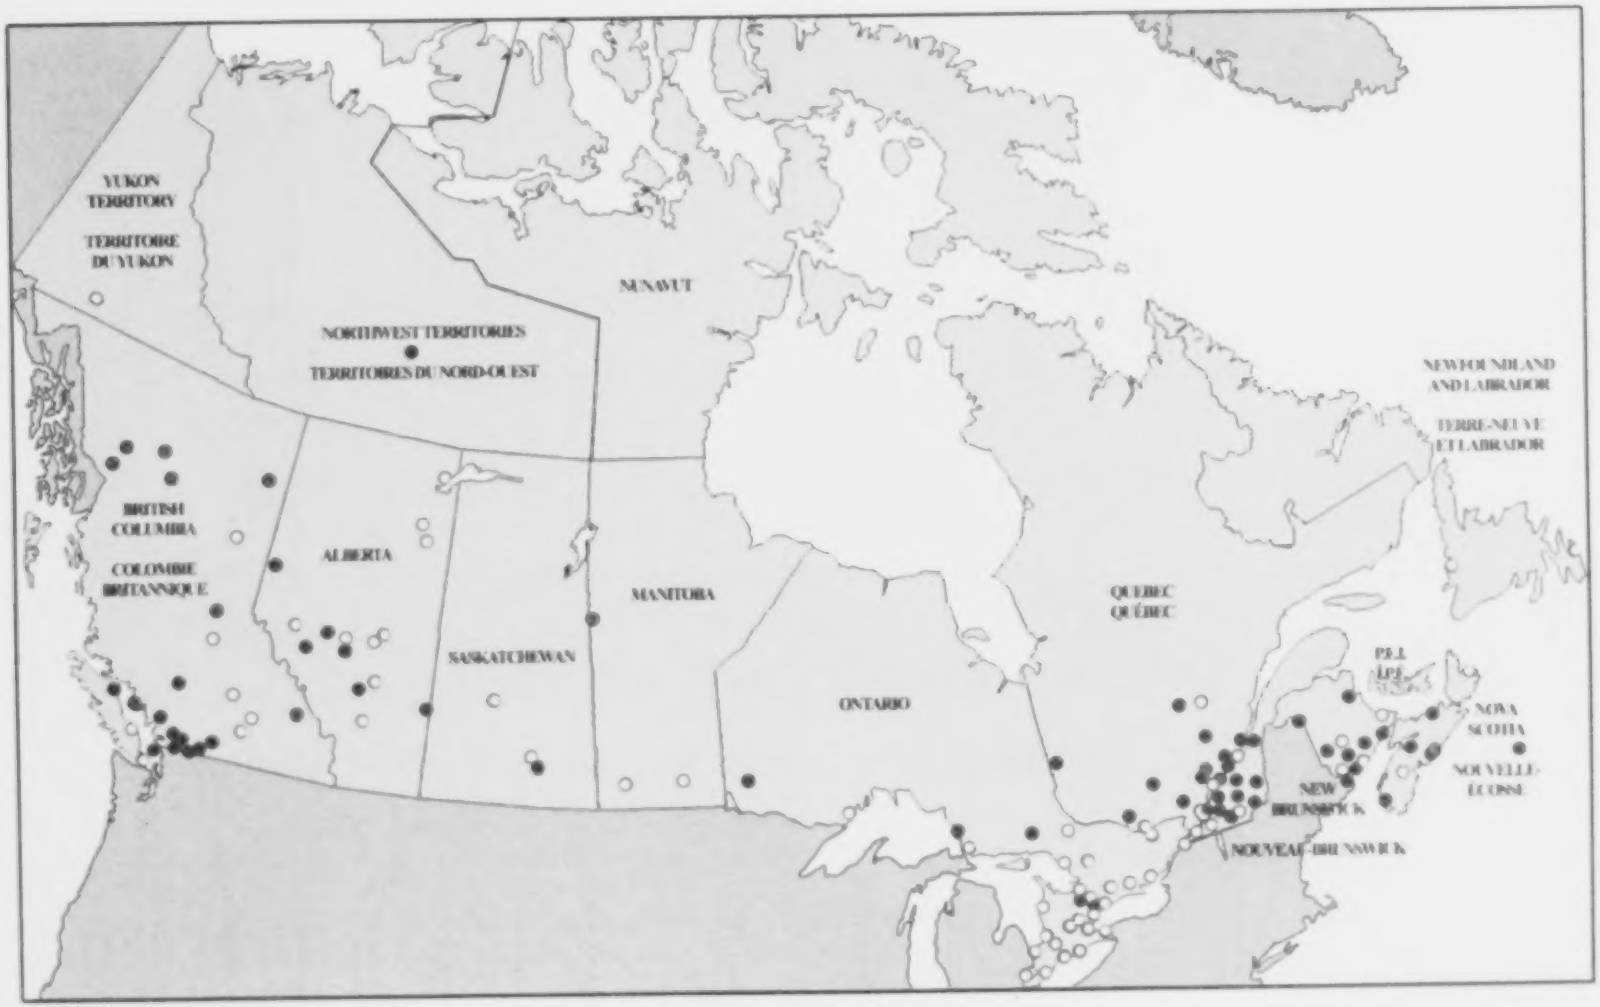
Standards* pancanadiens relatifs aux matières particulaires et à l'ozone

Polluant	Période de la moyenne	Norme	Année pour conformité	Commentaires
$MP_{2,5}$	24 heures	30 µg/m^3	2010	La conformité sera déterminée en fonction de la moyenne annuelle de la valeur du 98^e percentile, calculée sur trois années consécutives.
Ozone	8 heures	65 ppb	2010	La conformité sera déterminée en fonction de la la moyenne de la 4^e mesure annuelle la plus élevée, calculée sur trois années consécutives.

* Les présents standards pancanadiens (SP) relatifs aux matières particulaires (MP) et à l'ozone sont établis en vertu de l'Accord pancanadien sur l'harmonisation environnementale de 1998 du Conseil canadien des ministres de l'environnement (CCME) et de l'Entente auxiliaire pancanadienne sur les standards environnementaux. **Les résultats présentés dans le présent rapport sont strictement préliminaires et ne doivent pas être interprétés comme atteignant les SP**. Les SP pour les matières particulaires et l'ozone doivent être atteintes d'ici 2010. Un rapport complet sera rédigé d'ici 2005 et à tous les cinq ans par la suite pour évaluer les progrès réalisés au sujet de toutes les dispositions des SP, notamment l'évaluation des concentrations ambiantes, les tendances et l'identification des agglomérations où les niveaux ambiants dépassent ou approchent les SP.

$MP_{2,5}$ sont des matières particulaires dans l'air mesurant 2,5 micromètres ou moins de diamètre.

Ozone (O_3) une forme de l'oxygène qui se trouve dans l'atmosphère sous forme de gaz au niveau du sol.



Stations Participating in the National Air Pollution Surveillance Network Measuring O_3 or $PM_{2.5}$ or Both.
Stations participant au réseau national de surveillance de la pollution atmosphérique mesurant O_3 ou $MP_{2.5}$ ou les deux.

O_3 ●

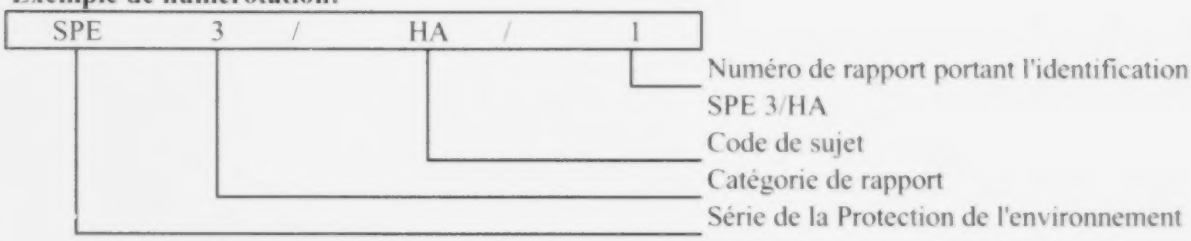
SÉRIE DE LA PROTECTION DE L'ENVIRONNEMENT

Exemple de numérotation:



SPE 3 / HA / 1
Numéro de rapport portant l'identification SPE 3/HA
Code de sujet
Catégorie de rapport
Série de la Protection de l'environnement

Catégories

1 Règlements/Lignes directrices/Codes de pratiques
2 Évaluation des problèmes et options de contrôle
3 Recherche et développement technologique
4 Revues de la documentation
5 Inventaires, examens et enquêtes
6 Évaluations des impacts sociaux, économiques et environnementaux
7 Surveillance
8 Propositions, analyses et énoncés de principes généraux
9 Guides

Sujets

AG Agriculture
AN Technologie anaérobie
AP Pollution atmosphérique
AT Toxicité aquatique
CC Produits chimiques commerciaux
CE Consommateurs et environnement
CI Industries chimiques
FA Activités fédérales
FP Traitement des aliments
HA Déchets dangereux
IC Produits chimiques inorganiques
MA Pollution marine
MM Exploitation minière et traitemant des minéraux
NR Régions nordiques et rurales
PF Papier et fibres
PG Production d'électricité
PN Pétrole et gaz naturel
RA Réfrigération et conditionnement d'air
RM Méthodes de référence
SF Traitement des surfaces
SP Déversements de pétrole et de produits chimiques
SRM Méthodes de référence normalisées
TS Transports
TX Textiles
UP Pollution urbaine
WP Protection et préservation du bois

Des sujets et des codes additionnels sont ajoutés au besoin. On peut obtenir une liste des publications de la SPE en s'adressant aux Publications de la Protection de l'environnement, Service de la protection de l'environnement, Environnement Canada, Ottawa (Ontario) K1A 0H3
